

PROFESSIONAL SUMMARY

Software Engineering student (4.0 in-major GPA) building AI-powered, cloud-native, full-stack applications. Contributor to faculty-supervised research on LLM-integrated tutoring systems and a serverless AWS virtual-patient training platform. Experienced leading development teams and delivering software with faculty, researchers, and cross-functional stakeholders.

EDUCATION

Florida Gulf Coast University — B.S. Software Engineering

Fort Myers, FL | Expected May 2027

- In-Major GPA: 4.0 | Dean's List (2023, 2024, 2025)
- Honors: Ruth M. and Cleveland L. Campbell Engineering Scholarship Endowed Fund, Kunkle Family Scholarship Endowed Fund
- Relevant Coursework: Machine Learning (Spring 2027), AI Agent Studio (Spring 2027), Software Architecture & Design (Spring 2027), Intro to Data Engineering, Software Testing, Requirements Engineering & Analysis, Intro to Cloud Computing, Data Structures & Algorithms, Software Engineering Fundamentals, Assembly Language Programming, Computer Security, Operating Systems, Calculus III, Differential Equations

TECHNICAL SKILLS

- **Languages:** C, C++, Python, JavaScript, SQL
- **Applied AI:** Agentic AI system design, LLM-integrated tutoring systems, prompt-driven application design
- **Cloud:** AWS (API Gateway, Lambda, Aurora, Cognito, IAM)
- **Backend:** Flask, PostgreSQL, Supabase, SQLite
- **Frontend:** React, Vite, Tailwind CSS
- **Dev Tools:** Git, GitHub Actions, Selenium, Jira, pgAdmin, VS Code, CLion

RELEVANT EXPERIENCE

FGCU Dendritic AI & DS Institute — Student Research Assistant

Mar 2025 – Present | On-site

- Built and deployed a suite of 14+ custom AI tutors now in active use across the Engineering Learning Hub, driving adoption in tutoring, mentoring, and knowledge-assistance workflows.
- Scaled AI training to 500+ participants and 150+ instructional hours by coordinating logistics and content delivery for the 2026 FGCU Summer AI Academy.
- Informed the institute's technology roadmap by evaluating emerging Agentic AI frameworks and recommending adoption paths for future educational and operational deployments.

Router-Level Security Detection — Subteam Lead & Backend Developer

Feb 2025 – Apr 2025 | On-site

- Delivered a production-ready home-network security platform on schedule by leading backend architecture decisions and task coordination for a 5-member team on the Eagle CyberNest Lab research project.
- Enabled real-time, centralized monitoring across three router platforms by building Flask backend services with SSH and SQLite for secure data collection.
- Improved system reliability and security by testing and deploying production-ready router-communication scripts.

PROJECTS

MAIVA – AI Virtual Patient Training Platform — React, Vite, Tailwind CSS, AWS (API Gateway, Lambda, Aurora, Cognito, IAM) — In Progress

- Translated multi-stakeholder requirements into a structured system architecture by gathering input across two university colleges and co-designing data models for realistic, LLM-driven patient personas.
- Built a functioning serverless full-stack application by developing the React/Vite/Tailwind frontend and integrating it with a serverless AWS backend (API Gateway, Lambda, Aurora, Cognito, IAM).
- Scoping Unreal Engine-based avatar rendering as the platform's next phase of development.

Switch4Good Database System — PostgreSQL, SQL, Data Engineering

- Enabled data-driven nonprofit operations at scale, supporting 100+ universities and 1,500+ students, by leading development of a PostgreSQL database and schema for participation, projects, partnerships, and outcomes.

NHL Stat Scraper — Python, Flask, Selenium, React, Vite, Render, Netlify

- Delivered a full-stack analytics application for searching and comparing live stats across every NHL player by building a Selenium-based Flask scraper covering 15+ stat categories, exposed through REST APIs.
- Enabled dynamic, filterable stat views (e.g., goals, assists) by developing a React/Vite frontend driven by query parameters.

Pinterest Testing Suites — Java, Selenium

- Led a 2-person Selenium testing team evaluating functionality, usability, and regression scenarios across Pinterest's core features.
- Set up the Selenium/TestNG automation environment and contributed to all 46 test cases across 8 modules, personally authoring 25 (Login, Profile, Board Management, Notifications/Settings), achieving a 97.8% pass rate.
- Diagnosed and resolved Pinterest's bot-detection rate limiting during test execution, restructuring login test timing to maintain reliable automated runs.

LEADERSHIP & INVOLVEMENT

FGCU AI Day — Panelist

March 2026

- Presented on "AI in University Operations," showcasing RAG-enhanced AI tutors built for the Engineering Learning Hub.

Pinterest Testing Suites — Team Lead

March 2026 – May 2026

Switch4Good Database System — Team Lead

January 2026 – May 2026

Eagle CyberNest Lab — Subteam Lead (Router-Level Security Detection, 5-member team)

Feb 2025 – Apr 2025

DeepTech Club — Member

June 2026 – Present

Computer Science & Software Engineering Club — Member

August 2024 – Present

CERTIFICATIONS

- Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate
